

Building Envelope Symposium

February 8, 2012

Location:
Drake Center—University
of Cincinnati—Health
Meeting Room G
Cincinnati, Ohio

Presented by:
Building Construction Technology
Education CenterSM
A division of

Morning Session 8:00—11:30 a.m.

Pavement Management

This presentation will describe how to develop a Pavement Management Program for multiple sites. By developing such a program facility managers can plan and forecast their maintenance, operational and capital budgets for each site. In addition to reviewing different pavement technologies, we will review pavement project management processes.

Construction Documents/Specifications Seminar

This session is designed to set forth the basic principles of specifications writing. The program will examine the specifications proper, Divisions 1-16 from Construction Specification Institute (CSI). The structure of these sections will be explained. You will learn about the appropriate language, organization and location of information used within all standardized specifications. The legal aspects and administrative requirements of construction documents, including specifications, will also be reviewed.

Roundtable Lunch / Case Study

Afternoon Session 1:00—4:30 p.m.

What You Don't See Will Absolutely Hurt You!!

Infrared Technology and Your Roof

Thermal imaging of the roof is generally agreed upon by experts as being the most reliable method for detecting moisture. This method does not require direct contact with the roof, but rather takes pictures of 100% of the roof surface. This allows for a relatively quick inspection. This also enables a precise picture of the roof to be viewed. The results are shown visually and are also normally mapped out on the roof surface. This process ensures that accurate repairs can be made on the roof system to remove the areas of wet insulation, therefore maximizing the service life of the roof system. This process will enable the building owner to properly rate and prioritize (Roof Condition Index) major capital projects, as well. In addition, there are numerous applications for exterior walls and building envelope.

Building Envelope Restoration

This program focuses on identifying problems and solutions related to the exterior envelope of buildings. You will learn the components that comprise the building exterior, including masonry, concrete, windows, cladding and roofing. The causes and effects of conditions that create potential building problems will be reviewed, along with viable solutions.
